

WhatsApp for Node- RED

- [Sending messages via Node Red](#)

Sending messages via Node Red

1. First, let's add the inject function

8de92e87266f66a4d73054cc365ead64.png

2. Next, in the WhatsApp tab, select the "Send a text" function

353e72b7d4e9b4020822ae27721365fc.png

3. After adding a function to the working field, double-click on it. In the account tab, add your account using the keys that we will send you after the connection is completed. In the Destination tab, enter the recipient's phone number, in the "Message" tab - the text of the template message.

6da91648de7cd1dab71704a9d53d4b38.png

4. Next, add the Debug tab

6cecf7c7c9bdbf32a513f755a4a03dcb.png

5. After adding it to the working field, double-click on it and set the settings, as in the screenshot

55226fa1abff660d73587d6bfe6d5b60.png

6. Then click "Expand" at the top right.

09daf337d013ed41a81f3724086c090b.png

7. To send a message, use the square next to the "Inject" function
